About...

Idea

“Hey we should try 3D”
“That sounds fun”
(It was not fun)

During the course of the semester we were asked to come up with an idea that we would like to create into a game. No stipulations were forced upon us allowing our creativity to roam free.

Our Roles:

Miles (Modeling)

Matt (Programming and SFX)

Justin (Programming)

Introduction

The Idea

We wanted to make a game that accomplished these goals:

- Was properly in 3D
- Had a somewhat complicated enemy
- Had a good ambience
- Is visually pleasing

Struggles/Wins

Wins

- The audio interfacing with Godot was exceptionally easy
- The map making was fun and intuitive
- The overall project made us more robust programmers

Struggles

- The collision was messing with the enemy and the map needed constant tweaking
- Programming an enemy in general was quite annoying as well as getting the items to spawn randomly around the map without going out of bounds lead to some frustration

The Ending

The goals we set for ourselves were dutifully completed and we now have a game that we can confidently say is a good showcase of our skills in godot throughout this semester despite the hiccup 3D gave us.

A screenshot of a game's title screen. The background is dark with a subtle geometric pattern. The text "LOST and FOUND" is centered in a white, sans-serif font. Below it, a dark rectangular button with the word "PLAY" in white, sans-serif font is centered.
